FOR IMMEDIATE RELEASE

OAK MANAGEMENT IS CONTRACTED BY BATH IRON WORKS TO SUPPORT THE LCS-2 PROGRAM

Alexandria, Virginia – 4 October 2007 – OAK Management, Inc. announced today that a Professional Service Agreement has been signed with Bath Iron Works (Bath, Maine – A General Dynamics Company) for the development of the Damage Control Action Management System (DCAMS) in support of the LCS-2 Program. DCAMS will be integrated into the LCS-2 Total Ship Computing Environment (TSCE).

DCAMS is a ship visualization tool, providing real-time, tactical damage control information during casualty situations. Increased spatial awareness of casualty locations enhances the ability of the Commanding Officer and Damage Control Assistant to see ship-wide "big picture" status.

OAK Management is a small business focused on supplying clients with innovative solutions in the area of program management, systems engineering, and software development services to the Federal government and commercial clients since 1981. Specific capabilities include mechanical and electrical engineering, naval architecture, software application and database development and associated acquisition program management support. OAK Management's innovative solutions support our clients in engineering disciplines from concept design through detail design and construction.
