FOR IMMEDIATE RELEASE

## OAK MANAGEMENT CONTRACTED BY LOCKHEED MARTIN TO SUPPORT LCS 1

OAK Management was recently contracted by Lockheed Martin Corporation's Maritime Systems and Sensors business for the development and installation of Damage Control related systems and documentation for the U.S. Navy's first Littoral Combat Ship named *Freedom* (LCS 1). *Freedom* is the inaugural ship in an entirely new class of U.S. Navy surface warships designed to defeat growing littoral, or close-to-shore, threats and provide access and dominance in coastal waters.

OAK Management will be installing the Damage Control Action Management System (DCAMS) for the tactical management of shipboard fire and flooding casualties, as well as providing other damage control systems support and training.

"OAK Management is excited to be part of this new class of Navy combat ship and we look forward to continuing to supply superior Damage Control Action Management Systems for the Navy," said John O'Mara, Vice President of OAK Management.

More information on the Lockheed Martin LCS team, including images of *Freedom*, are available at <http://www.lmlcsteam.com/news.html>

OAK Management is a small business focused on supplying clients with innovative solutions in the area of program management, systems engineering, and software development services to the Federal government and commercial clients since 1981. Specific capabilities include mechanical and electrical engineering, naval architecture, software application and database development and associated acquisition program management support. OAK Management's innovative solutions support our clients in engineering disciplines from concept design through detail design and construction.
